## INSTALLATION AND USAGE

This simple tool converts your elink 1.0 data to be compatible with elink 2.1B software in Windows or Mac.

Before installing this tool in Windows OS or Mac ensure that you have the latest elink 2.1B software installed on your computer. Please download the latest elink2.0 or above version from [www.efergy.com](http://www.efergy.com)

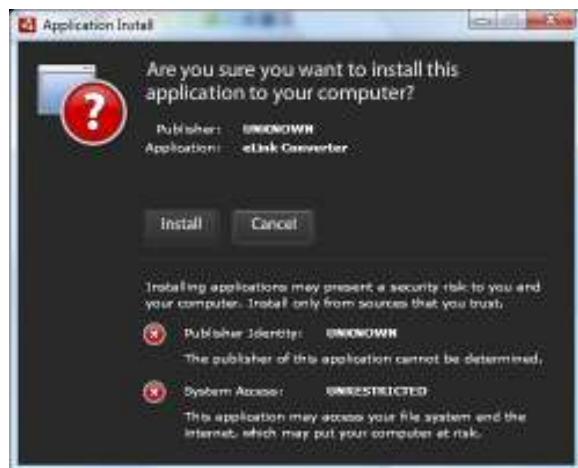

System Requirements – elink 2.1B or above software, Adobe Air. Compatible with Mac OS, Windows XP, Vista or Windows 7.

- Install/ Run the eLink Converter tool's installer package and follow the onscreen steps.

- Close the elink converter tool (if it opened after installation) and restart the tool by clicking on the elink converter icon on desktop.

**IMPORTANT** - If you are using Windows Vista or Windows 7, always start the tool by right-clicking the elink Converter icon on desktop and 'Run as Administrator'.

- Click 'Browse' on elink converter tool and locate your elink 1.0 program's data (.CSV file) which can be found in the elink 1.0 program files REPOSITORY folder e.g. C:\Program Files\elink\Repository\#001.csv

- Click 'Import' button on elink converter tool. On successful conversion you will see a message confirming 'Import Successful'. Click 'Done' and exit the elink converter tool.

- Ensure that the elink 2.1B program is not running and you have backed up all your previous data in elink 2.1B BEFORE the following step.

- Go to elink Converters program's folder and locate the data.db file which can be found in the folder 'database' e.g. C:\Program Files\elink Converter\database\data.db

- Select and copy the 'data.db' file from your elink Converter database folder to your elink 2.1B program folder's 'database' folder. Replace the elink 2.1B original 'data.db' file with the new 'data.db' file. Do NOT change, move, edit or delete any other files in elink 2.1B database folder.

## ELINK CONVERTER INSTALLATION PROCEDURE

AUTHOR - efergy

- Start your elink 2.1B and your elink 1.0 data should now be visible on elink 2.1B program.
- Following the same steps you can also convert your elink 1.0 backed up data. Just locate your elink 1.0 backed up '.CSV' file and convert to 'data.db' to use in elink 2.1B program.
