energy monitoring socket

efergy®

Monitor your appliance's use

Realise the cost of using individual appliances

View energy use and cost so far

View rates using dual or single tariff modes

Easy to use, just plug in and view energy data instantly

EU

UK

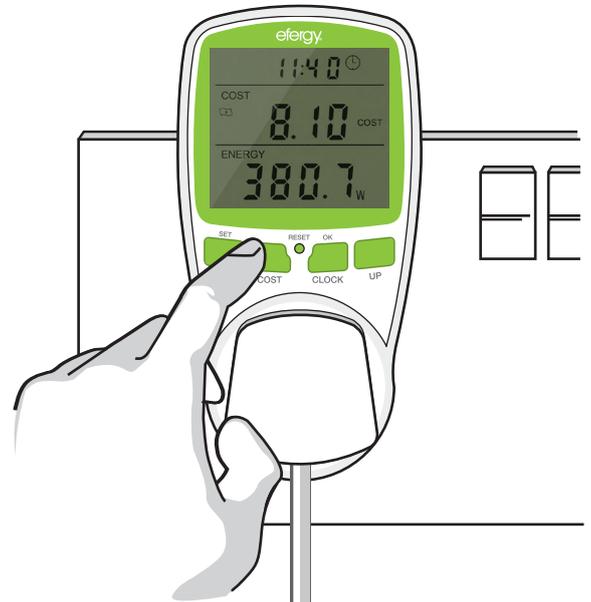

AU

The **energy monitoring socket (EMS)** uses real time data to help you become more aware of how much electricity an appliance is using. With this knowledge you can make more informed choices about what, when and how to use the appliance according to your energy saving objectives.

How it works

The **EMS** is a simple plug-in device that sits between the appliance and the wall socket. When you plug in an appliance, the **EMS** displays the consumption of that appliance in watts and the cost per year. You can also view the cost accumulated so far and the cost per day by pressing the cost button.

Instant savings

The **EMS** uses real-time data to help you become more aware of how much electricity an appliance is using. With this knowledge you can make more informed choices about what, when and how to use the appliance according to your energy saving objectives.

Cumulative data

The **EMS** adds up your energy data cumulatively so that you can see how much energy you've used since the appliance was switched on. Also you can check how long the appliance has been running for by pressing the UP button.

What's in the box

1 x Energy Monitoring Socket

Display range

Time:	0s - 9999 days	Current:	0.000 - 16.00A
Power:	0W - 9999W	Frequency:	0.000 - 9999Hz
Energy:	0 - 9999kWh	Price:	00.00 - 99.99€
Voltage:	0 - 9999V		

Technical details

Model:	EMS
Operating voltage:	230V
Operating current:	16A max.
Working voltage:	175V - 276V
Accuracy:	± 2%
Dimensions:	75x70x147mm
